

Deltek Costpoint Project Management Capabilities

Integrated, centralized project management for modern companies with government contracts

As a Project Manager, you know what you know about your projects and you work diligently to eliminate surprises. However, with potential unknowns coming at you from all directions, you need to be able to prepare for them to keep your project on budget and on time.

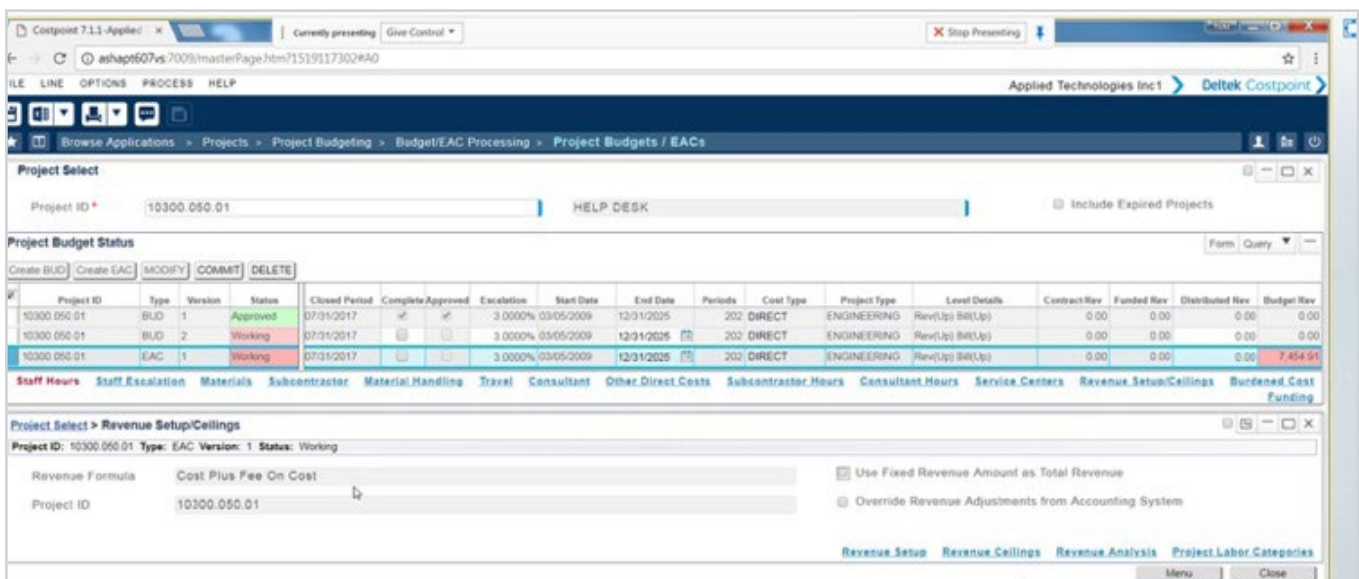

Preparing for customer or engineering changes, resource issues, and approval bottlenecks is a lot easier when you can see the entire scope of what is currently happening with your project. What is the burn rate? Do your numbers match accounting's? What is the labor demand? What are the contractual obligations? Have all of the time sheets been submitted?

Costpoint's Project Management capabilities help you quickly answer these questions. Starting with dashboards, you can keep things at a summary level or drill into details.

Many out-of-the box reports, as well as reports you can create, will also keep you in the know.

As a project-based ERP system, Costpoint provides one platform on which all teams work. Accounting, projects, materials, contracts and others see updates as they happen allowing them to work with real-time data. (Say goodbye to many manual processes.) Additionally, contractual obligations flow throughout the system, supporting teams with compliance requirements.

When changes happen, you can be assured that you are taking the most beneficial approach by setting up an EAC or budget versions for what-if scenarios. Costpoint eliminates guessing and provides clarity so your communications with teams and customers are based on solid data and predictable outcomes.

Project budget creation with subtasks.

Key Features:

- Plan at the proposal stage
- Easily set up approval workflows and establish thresholds
